READ ME

RESTAURANT

TOOLS &MODULES USED:

- Tools Used are Webstorm
- As per the requirement initially I have Created an index.html which serves as the main page displaying the main homepage of the restaurant website
- On the Main page you have options for the user and owner
- For the User module
    - the user can book a table by clicking on the book button
    - View the menu
    - Edit or cancel his reservation (for this the user has to enter the confirmation code)
    - I have created some dummy codes #BID124, #BID672, #BID526, #BID286, #BID429 which I am validating and if its correct I the user can edit or cancel reservation

- For the Owner Module
  The Owner can login(please use the below details I have just hardcoded these and validating)
  Username: admin
  password: admin123

    - After successful login the owner can view reservations(list ->detail view)
    - view seating (table number and confirmation code-->detail view)
    - Create/edit reservation
    - edit/update the profile setting of the restaurant
    - Assign a table by entering name code and selecting table number.

- On the main home page the users can follows on social networking sites(added small icons)

USAGE INSTRUCTIONS:

1. double Click on startserver file(this will start the server)
2. Launch the URL   http://localhost:8888/index.html
